

Measuring Instructions for your Hamster Baskets Freezer Baskets

Look at our mock freezer above:

Please provide measurements in inches.

We recommend the bottom layer of baskets is the same height as your motor housing. We find these baskets are rarely removed from the freezer and as such they can be larger than the remaining baskets.

Divide the remaining freezer space in to 2 layers and as many of few baskets as you prefer. We advise you keep the baskets in the top 2 layers the same size so they are interchangeable.

Please subtract half an inch from your Length measurement to allow for free movement inside the freezer.

Please note any potential obstructions within the freezer, for example the lid of some freezers close inside the freezer space, reducing the height available for your baskets.

The standard basket price covers any basket in any size up to the following maximums:

Length 22 ½"

Width 16 ½"

Height 12"
